

Frontend Integration Guide

Financial Metrics Endpoints

A comprehensive guide for integrating the Daily Financial Breakdown & Export endpoints into your frontend application.

1. Overview

This guide explains how to integrate the **Daily Financial Breakdown & Export** endpoints into your frontend application. These endpoints provide paginated dashboard data and streamed CSV exports for performance analytics.

2. Endpoints Summary

Endpoint	Method	Response	Use Case
/api/v1/dashboard/financial-metrics	GET	JSON (Paginated)	Display analytics dashboard
/api/v1/performance/daily-financials	GET	JSON (Paginated)	Alias for dashboard
/api/v1/dashboard/financial-metrics/export	GET	CSV (Streamed)	Download financial report
/api/v1/performance/daily-financials/export	GET	CSV (Streamed)	Alias for export

3. Authentication & Headers

All endpoints require Bearer token authentication and optional tenant header:

```
const headers = {
  'Authorization': `Bearer ${localStorage.getItem('admin_token')}`,
  'Accept': 'application/json',
  'X-Tenant': 'naijria' // or 'kenya'
};
```

4. Dashboard Endpoint: Paginated JSON Response

Purpose: Fetch paginated daily financial metrics with ROI trends and performance indicators.

Request Parameters:

```
const params = {
  from: '2026-08-01', // Start date (YYYY-MM-DD)
  to: '2026-08-31', // End date (YYYY-MM-DD)
  exchange_rate: 1500, // Custom exchange rate
  page: 1, // Page number (default 1)
```

```
    per_page: 15                // Items per page (1-100)
  };
```

Key Response Fields:

Field	Type	Description
daily_roi	float	Raw ROI percentage value
daily_roi_display	string	Formatted ROI (e.g., "86.48%")
roi_trend	string null	"Positive", "Negative", "Watch", or null
watch_alert	boolean	true if alert condition triggered
pnl_usd	float	Profit/Loss in USD

5. Export Endpoint: Streamed CSV Download

Download complete financial breakdown as a CSV file optimized for Excel, with data streamed in 200-row chunks.

Response Characteristics:

- **Content-Type:** text/csv; charset=UTF-8
- **Content-Disposition:** attachment; filename="financial_breakdown_...csv"
- **Streaming:** Chunked (200 rows per chunk)
- **UTF-8 BOM:** Included for Excel compatibility

■■ **CRITICAL:** The **responseType: 'blob'** is **REQUIRED** for CSV streaming. Without it, the response will not download correctly.

Frontend Implementation (React + Axios):

```
async function downloadFinancialReport(from, to) {
  const response = await axios.get(
    '/api/v1/dashboard/financial-metrics/export',
    {
      params: { from, to },
      headers: {
        'Authorization':
          `Bearer ${localStorage.getItem('admin_token')}`,
        'X-Tenant': 'naijria'
      },
      responseType: 'blob' // ← CRITICAL
    }
  );

  const blob = new Blob([response.data],
    { type: 'text/csv' });
  const url = window.URL.createObjectURL(blob);
  const link = document.createElement('a');
  link.href = url;
  link.setAttribute('download',
    `financial_report_${from}_to_${to}.csv`);
  document.body.appendChild(link);
  link.click();
  link.remove();
  window.URL.revokeObjectURL(url);
}
```

6. ROI Trend Indicator Guide

The **roi_trend** field provides a quick visual indicator of performance momentum:

Value	Meaning	Visual	Action
Positive	ROI higher than yesterday	■ Green	Continue strategy
Negative	ROI lower than yesterday	■ Red	Monitor closely
Watch	Alert condition triggered	■■ Yellow	Immediate attention
null	No comparison available	—	No action needed

Alert Conditions:

1. ROI Drop > 20 percentage points from yesterday

Example: Yesterday 80%, Today 55% → Alert

2. 3 Consecutive Negative ROI Days

Day 1: -5% ■ | Day 2: -3% ■ | Day 3: -8% ■ → Alert

7. Quick Reference Summary

Feature	Dashboard	Export
Response	JSON	CSV Stream
Use Case	UI Display	File Download
Pagination	Yes	No (full range)
Memory Efficient	Yes (paginated)	Yes (chunks)
exchange_rate Support	■ Yes	■ Yes
roi_trend Field	■ Included	Not applicable
Browser Download	No	Yes (blob)
