

DELIVERABLES & PRICING BREAKDOWN

Project: Kids Area Multitenancy (Kids Station SDP & Auth Flow)

COMPLETED WORK

Date: August 22, 2026

Total Amount for Completed Deliverables

5 Itemized Tasks Included • Backend & Telco Architecture

\$119.00 USD

1. Implemented Header Enrichment and the new authentication flow, including the HE endpoint, Echo endpoint, and frontend redirection.

\$80.00

WHAT WAS IMPLEMENTED FROM CODE:

- HE Entry Endpoint: Implemented `heEntry()` in `LandingPage.php` checking carrier X-MSISDN header, validating subscription via `SubscriptionHandling`, generating tokens via `LoginService`, and redirecting (302) to `/welcome?token=...`, `/new-subscription`, or `/guest`.
- Echo Diagnostic Endpoint: Built `heEcho()` returning all incoming carrier headers in JSON for operator testing.
- Database Tracking & Model: Added migration `2026_08_01_000001_create_he_entries_table.php` and `HeEntry` Eloquent model to log MSISDN, headers array, query params, IP, user-agent, redirect URL, and status.
- Route Configuration: Protected `/mtn/he/entry` and `/mtn/he/echo` routes under `UseMtnCallbackTenant` middleware in `routes/api_v1.php`.
- Automated Tests & Postman: Created test suites in `HeaderEnrichmentTest.php` & `HeaderEnrichmentUnitTest.php`, and updated `Landing_Page.postman_collection.json`.

2. Configured promotional links and plan-specific redirections, including success and failure endpoints.

\$30.00

WHAT WAS IMPLEMENTED FROM CODE:

- SDP Dynamic Redirect: Implemented `sdpRedirect()` in `LandingPage.php` mapping plan durations (1day, 1week, 2weeks, 1month / Telco product IDs) to operator landing pages while preserving `trfsrc` and generating `trxld`.
- Public SDP Callbacks: Created `sdpSuccess()` to log charging payloads into `sdp_responses` table, and `sdpFailure()` to handle charge failure callbacks.
- Public API Routes: Registered `/sdp/redirect`, `/sdp/entry`, `/sdp/success`, and `/sdp/failure` in `routes/api_v1.php` (no token required).

3. Made the name and password optional on the login and start pages.

\$5.00

WHAT WAS IMPLEMENTED FROM CODE:

- Optional Profile Name: Modified `UpdateProfileRequest.php` validation rules making name optional (`null|nullable|string`) during onboarding.
- Login Refactor: Updated `SafaricomLoginRequest.php` and `WebsiteController.php` allowing users to authenticate via phone without password.
- Updated Test Suites: Adjusted `WebsiteRegistrationFlowTest.php` and `WebsiteAuthTest.php` to cover optional credential flows.

4. Updated the user update endpoint to return the access token.

\$3.00

WHAT WAS IMPLEMENTED FROM CODE:

- Token Generation: Modified `updateProfile()` in `WebsiteController.php` to return `access_token` and `refresh_token` upon profile update.
- Phone-Based Lookup: Enabled updating user profiles directly by phone without requiring an existing Bearer token.
- Guard Handlers: Added checks returning 404 (user not found) and 409 Conflict ('This user is already existed') if already updated.

5. Removed all password validation requirements.

\$1.00

WHAT WAS IMPLEMENTED FROM CODE:

- Validation Cleanup: Removed strict regex constraints and password complexity rules in `LoginRequest.php` and `SafaricomLoginRequest.php`.
- Passwordless Flow: Bypassed legacy password checks in `WebsiteController.php` to support passwordless phone-based onboarding.
